ACKNOWLEDGMENTS

Many persons participated in the various activities of the 1987 Census of Transportation.

The overall planning and review of the census operations were performed by the staff of the Office of the Assistant Director for Economic and Agriculture Censuses.

This report was prepared in the Business Division. **Bobby E. Russell**, Assistant Division Chief for Census Programs, and **James M. Aanestad**, Assistant Division Chief for Current Services and Transportation Programs, were responsible for the overall planning, management, and coordination of the 1987 Census of Transportation. Planning and implementation were under the direction of **Robert E. Crowther**, Special Assistant, and **William G. Bostic**, Chief, Transportation Characteristics Survey Branch, with primary staff assistance by **Nancy Piesto**, the late **Sandra Richardson**, **Linda Hutton**, **Tempie Whittington**, **Georgeann Wright**, **Toy Walker**, **Geroid Morning**, **Joanne Bluhm**, **Jennifer Juzwiak**, and **Vernetta Southerland**.

Sample design and statistical methodology were developed under general direction of **Joseph K. Garrett**, Assistant Division Chief, Research and Methodology. Sample design, including estimation and variance methodology, was under the supervision of **Ruth E. Detlefsen**, Chief, Program Research and Development Branch, with primary staff assistance by **Anne Wakim** and **Susan Hagar**. Imputation and quality control procedures were developed under the supervision of **Carl A. Konschnik**, Chief, Statistical Methods Branch, with primary staff assistance by **David Raglin**.

Systems and procedures for mailout, receipt, correspondence, data input, industry classification, other clerical processing, administrative record processing, and quality control, along with the associated electronic computer programs, were developed in the Economic Surveys Division, **W. Joel Richardson**, Chief.

Mailout preparation and receipt operations, clerical and analytical review activities, data keying, and geocoding review were performed by the staff of the Data Preparation Division, **Joseph S. Harris**, Chief.

Geographic coding procedures and associated computer programs were developed by the staff of the Geography Division, **Robert W. Marx**, Chief.

The computer processing systems were developed and coordinated in the Economic Programming Division, **Barry M. Cohen**, Chief. **H. Ray Dennis**, Assistant Division Chief for Business and Construction Programs, was responsible for implementation of the computer systems. The computer programs were prepared under the supervision of **James R. Parker**, Chief, Special Projects Branch, assisted by **Andrew Stevenson**, **Scott Ankers**, **Earnestine Kornegay**, and **Robin Chin**.

Computer processing was performed in the Computer Services Division, **Marvin D. Raines**, Chief.

The staff of the Administrative and Publications Services Division, **Walter C. Odom**, Chief, performed planning, design, composition, editorial review, and printing planning and procurement for publications and report forms. **Christine R. Nelson** provided publication coordination and editing.

Special acknowledgment is also due the respondents whose cooperation has contributed to the publication of these data.

If you have any questions concerning the statistics in this report, call (301) 763-2735.

PURPOSE AND USES OF THE ECONOMIC CENSUSES

The economic censuses are the major source of facts about the structure and functioning of the Nation's economy. They provide essential information for government, business, industry, and the general public.

Economic censuses furnish an important part of the framework for such composite measures as the gross national product, input-output measures, production and price indexes, and other statistical series that measure short-term changes in economic conditions.

Policy-making agencies for the Federal Government use the data, especially in monitoring economic activity and providing assistance to business.

State and local Governments use the data to assess business activities and tax bases within their jurisdictions and to develop programs to attract business.

Trade associations study trends in their own and competing industries, and keep their members informed of market changes.

Individual businesses use the data to locate potential markets and to analyze their own production and sales performance relative to industry or area averages.

AUTHORITY AND SCOPE

Title 13 of the United States Code (sections 131, 191, and 224) directs the Census Bureau to take the economic censuses every 5 years, covering years ending in 2 and 7. The 1987 Economic Censuses consist of the

Census of Retail Trade

Census of Wholesale Trade
Census of Service Industries
Census of Transportation
Census of Manufactures
Census of Mineral Industries
Census of Construction Industries

Special programs also cover enterprise statistics and minority-owned and women-owned businesses. (The 1987 Census of Agriculture and 1987 Census of Governments are conducted separately.) The next economic censuses are scheduled to be taken in 1993 covering the year 1992.

AVAILABILITY OF THE DATA

The results of each of the economic censuses are available in printed reports, for sale by the U.S. Government Printing Office, and on microfiche, computer tape, compact discs with read-only memory, and flexible diskettes, for sale by the Census Bureau. Order forms for all types of products are available on request from Customer Services, Census Bureau, Washington, DC 20233. A more complete description of publications being issued from this census is on the inside back cover of this document.

Census facts are also widely disseminated by trade associations, business journals, and newspapers. Volumes containing census statistics are available in most major public and college libraries. Finally, State Data Centers in every State and Business and Industry Data Centers in many States also supply economic census statistics.

HISTORICAL INFORMATION

The economic censuses have been taken together as an integrated program at 5-year intervals since 1967, and before that for 1963, 1958, and 1954. Prior to that time, the individual censuses were taken separately at varying intervals.

The economic censuses trace their beginnings to the 1810 Decennial Census, when questions on manufacturing were included with those for population. Coverage of economic activities was expanded for 1840 and subsequent censuses to include mining and some commercial activities. In 1902, Congress established a permanent Census Bureau and directed that a census of manufactures be taken every 5 years. The 1905 manufactures census was the first time a census was taken apart from the regular every-10-year population census.

The first census of business was taken in 1930, covering 1929. Initially, it covered retail and wholesale trade, and construction industries, but it was broadened in 1933 to include some of the service trades.

The 1954 economic censuses were the first to be fully integrated—providing comparable census data across economic sectors, using consistent time periods, concepts, definitions, classifications, and reporting units. These were the first censuses to be taken by mail, using lists of firms provided by the administrative records of other federal agencies. Since 1963, administrative records have also been used to provide basic statistics as well for very small firms, reducing or eliminating the need to send them census questionnaires. The Enterprise Statistics Program, which publishes combined data from the economic censuses, was made possible with the implementation of the integrated census program in 1954.

The range of industries covered in the economic censuses has continued to expand. The Census of Construction Industries began on a regular basis in 1967, and the scope of service industries was broadened in 1967, 1977, and 1987. The Census of Transportation began in 1963 as a set of surveys covering travel, transportation of commodities, and trucks. New for 1987 are publications reporting on business establishments engaged in several transportation industries, paralleling the data on establishments in other sections. This is part of a gradual expansion in coverage of industries previously subject to government regulation. The Survey of Minority-Owned Business Enterprises was first conducted as a special project in 1969 and was incorporated into the economic censuses in 1972 along with the Survey of Women-Owned Businesses.

Economic censuses have also been taken in Puerto Rico since 1909, in the Virgin Islands and Guam since 1958, and in the Northern Mariana Islands since 1982.

Statistical reports from the 1982 and earlier censuses provide historical figures for the study of long-term time series, and are available in some large libraries. All of the census data published since 1967 are still available for sale on microfiche from the Census Bureau.

AVAILABILITY OF MORE FREQUENT ECONOMIC DATA

While the censuses provide complete enumerations every 5 years, there are many needs for more frequent data as well. The Census Bureau conducts a number of monthly, quarterly, and annual surveys, the results of which appear in publication series such as *Current Business Reports* (retail and wholesale trade, service industries, and transportation), the *Annual Survey of Manufactures*, *Current Industrial Reports*, and the *Quarterly Financial Report*. Most of these surveys, while providing more frequent observations, yield less kind-of-business and geographic detail than the censuses. The *County Business Patterns* program offers annual statistics on the number of establishments, employment, and payroll classified by industry within each county.

TRUCK INVENTORY AND USE SURVEY, 1987 CENSUS OF TRANSPORTATION

The Truck Inventory and Use Survey (TIUS) provides data on the physical and operational characteristics of the Nation's truck population. It is based on a probability sample of private and commercial trucks registered (or licensed) in each State during 1987.

The following types of vehicles were excluded from this survey prior to sampling: those owned by Federal, State, and local governments; ambulances; buses; and motor homes. A small number of the vehicles sampled were determined to be "out-of-scope" of the survey. These cases include: farm tractors; unpowered trailer units; and trucks reported to have been sold, junked, or wrecked, prior to the registration year.

Many States allow pickups, small vans, and utility-type vehicles to be registered as cars or trucks. Therefore, the passenger car files were searched and any such trucks were included in the universe of trucks from which the sample was selected. Some vehicles such as "off-highway" trucks used exclusively on private property do not have to be registered. Therefore, they were not included in the universe and had no chance of being selected.

USES OF THE TRUCK INVENTORY AND USE SURVEY

TIUS information is of considerable value to State and Federal transportation agencies in the planning of highway cost allocations, improvements in road conditions, energy consumption, and emergency preparedness. The private sector also needs these data to plan for future vehicle designs and improvements, market studies, and more efficient vehicle usage.

TRUCK CHARACTERISTICS

The estimated number of trucks that were within the scope of the TIUS and registered in the United States as of July 1, 1987, was 44,572.2 thousand. These trucks were estimated to have been driven a total of 529,315.3 million

miles during 1987, an increase of 40.3 percent (± 2.0)¹ from 1982. The average annual miles traveled per truck was estimated at 11.9 thousand.

The Federal Highway Administration (FHWA) estimate of the number of private and commercial trucks registered in the United States as of December 31, 1987, was 39,529.6 thousand. This estimate is based on a calendar year summary report from each State. It reflects differences in truck definitions used by each State for vehicle registration from those used in the TIUS.

COMPARABILITY WITH PREVIOUS SURVEYS

Although the basic purpose and scope of the previous Truck Inventory and Use Surveys were essentially identical to this one, some new items were introduced in 1987, as well as some changes that may affect specific items in this report.

New items introduced in 1987:

1. **Width of trailer**—Respondents were asked to report the width of the trailer most often attached to the vehicle.
2. **Piggyback or container**—Respondents who received the TC-9502 form and who reported that they operated a truck tractor (power unit) pulling trailer(s) were asked to report the percent of annual mileage they hauled—
 - a. Railroad, ocean-going, or similar containers, and
 - b. Piggyback trailers.
3. **Accidents**—Respondents were asked if the vehicle was involved in an accident during 1987 and if the accident involved a fatality, bodily injury, or property damage of \$4,200 or more. This information is available on the public-use tape only.

1987 changes affecting specific items:

1. **Base of operation**—Respondents were asked to report the home base of the vehicle on “July 1, 1987,” instead of “for the last 12 months.”
2. **Percentage of hazardous materials carried**—Because over 50 percent of the trucks carrying hazardous materials carried them less than 25 percent of their annual miles in 1982, the category “Below 25%” was broken down into two categories: “Below 10%” and “10-24%.” The list of hazardous materials carried was expanded.

¹All comparisons are accompanied by a 90-percent confidence interval, so that a statement such as “an increase of 5.0 percent (± 5)” indicates a 90-percent confidence interval from 4.5 to 5.5. If the interval contains zero, it is uncertain whether there is an increase or decrease.

3. **Body type**—“Mini-vans” was made into a separate category instead of being included in the “Van” category.
4. **Major use**—“One-way rental” was made into a separate category instead of being included in the “Daily Rental” category.
5. **Products carried**—Four new categories were added to the list of products carried. They are: (1) glass products, (2) miscellaneous products of manufacturing, (3) industrial water, and (4) hazardous waste.
6. **Number of cylinders**—This item was deleted from the questionnaire, but the data were derived from an analysis of the vehicle identification number (VIN) and are included in the tables. “Not reported” indicates those trucks for which the cylinders are unknown.
7. **Transmission type**—This question was deleted from the questionnaire and data will not be made available for this item.
8. **Annual miles**—Respondents were asked how many miles the vehicle was driven in 1987. For those vehicles sold during 1987, a full year’s annual miles were estimated. In previous surveys, owners were asked to report their annual miles for the past 12 months, and if driven less than 12 months, to estimate the mileage for a full year.

EXPLANATION OF TERMS

Major use—This is based on the business or the part of the business in which the vehicle was used. The 15 specific major use categories conform to the generally accepted meaning of the terms.

Responses in the “Other” category were recoded to one of the specific categories if possible.

The category “Not in Use” in table 2 includes vehicles which, though licensed, were not used or were wrecked for more than 90 days.

Body type—This category includes the type of body that is either permanently attached to the power unit (i.e., straight or single-unit truck) or most frequently used with a truck tractor as a truck-tractor combination.

Range of Operation—The area in which the vehicle usually operated is classified as one of the following:

1. **Local**—Less than a 50-mile radius of the home base (the farm, factory, mine, or other place where the vehicle is stationed).
2. **Short range**—Within a 50 to 200-mile radius from the home base.
3. **Long range**—More than 200 miles one way to the most distant stop from the home base.
4. **Off-the-road**—Minimal use of public roads (usually associated with construction and farming activities).

Vehicle size—This size classification is based on the average vehicle weight (empty weight of the vehicle plus the average weight of the load carried) at which the vehicle operated during the past year. The four size classes are:

1. **Light**—Average vehicle weight of 10,000 pounds or less.
2. **Medium**—Average vehicle weight of 10,001 to 19,500 pounds.
3. **Light-heavy**—Average vehicle weight of 19,501 to 26,000 pounds.
4. **Heavy-heavy**—Average vehicle weight of 26,001 pounds or more.

Operator classification—This item consists of not for hire, for hire, daily rental, and mixed.

1. **Not for hire**—Includes a private owner or a company which transports its own materials or merchandise or uses the vehicle for personal transportation.
2. **For hire**—Includes the following:
 - a. **Motor carrier**—Those vehicles operated by a company whose primary business is to provide transportation services carrying freight belonging to others.
 - b. **Owner/Operator**—Vehicles operated by an independent trucker who drives the vehicle for himself or on lease to a company.
3. **Daily rental**—Vehicles rented or leased out under daily or short term rental or lease agreements (not motor carrier).
4. **Mixed**—A mixture of the operator classifications above with equal percentages of use for at least two of the three categories. If the percentages were not equal, the answer was recoded to the operator classification with the highest percentage.
5. **Type of carrier**—These categories are limited to for hire, interstate operators:
 - a. **Contract**—Offers transportation services to certain shippers under contracts.
 - b. **Common**—Offers transportation services to the general public over regular or irregular routes.
 - c. **Exempt**—Transports commodities or provides types of services that are exempt from federal regulation. Could also operate within exempt commercial zones.

Products carried—This item includes broad classifications of agricultural, manufacturing, and mineral products, as well as special categories of materials carried by trucks. Responses to the "Other" category were recoded to one of the 25 specific categories if possible.

Hazardous materials—This category was designed to identify those trucks which regularly transport hazardous materials in quantities large enough to require a placard under the Code of Federal Regulations, Title 49, Transportation.

Truck fleet size—The size of the truck fleet is based on the number of trucks operated by a truck owner from a single "base of operation." The fleet located at the "base of operation" usually is smaller than the total fleet that an owner has if he operates from more than one base. The data shown in the "Truck Fleet Size" section of the tables are based on the number of trucks found in fleets of specified size and not the number of fleets. (If this item on the survey form was unanswered, the vehicle was assumed to be in a fleet of one, classified in accordance with the reported vehicle type.)

SAMPLE DESIGN

The Truck Inventory and Use Survey was based on a stratified probability sample of approximately 135,000 trucks drawn from an estimated universe of approximately 47 million trucks registered as of July 1, 1987, with the motor vehicle departments in the 50 States and the District of Columbia.

A stratified random sample based on body type was selected in each State. The universe of trucks within each State was divided into five strata: "pickup," "van," "single-unit light," "single-unit heavy" and "truck tractor." The "pickup" truck stratum consisted of only pickup trucks. The "van" truck stratum consisted of panel trucks, vans, mini-vans, utilities, jeeps, and station wagons on truck chassis. The "single-unit light" truck stratum consisted of all other single-unit trucks with a gross vehicle weight (GVW) of 26,000 pounds or less. The "single-unit heavy" truck stratum consisted of the remaining single-unit trucks. The "truck tractor" stratum consisted of only truck tractors. Within each stratum in each State, a predetermined number of trucks was sampled in a random fashion.

Part of the sample (34 percent at the national level) was allocated to meet "minimum" standards of reliability for the estimate of total number of trucks for each State. An additional 28 percent of the sample was allocated to meet "minimum" standards of reliability for the estimate of number of trucks excluding pickups, panels, utilities, and station wagons for each State. The remaining additional sampling units were allocated to improve the reliability of the estimated number of long-haul trucks. The number of total trucks sampled ranged from 1,695 for the District of Columbia to 2,916 for California, the mean being 2,653 trucks per State.

SURVEY METHOD

For each selected truck, a report form was mailed to the owner identified in vehicle registration records as of July 1, 1987. The owner was asked to respond only for the truck

identified by the vehicle registration information imprinted on the form, regardless of whether or not he or she still owned the vehicle. The information received on the returned questionnaires was processed through an extensive computer edit. Reports which contained questionable responses were reviewed and corrected if necessary. In each stratum for a State, estimates of the number of trucks for each characteristic were developed by weighting up the observations from the respondents to represent all trucks in the stratum within the scope of the TIUS. The stratum estimates were then summed across strata to form the estimates published for each State. Truck miles were estimated in a similar way. National estimates of number of trucks and truck miles were then obtained by adding up all the State estimates. For each line in the tables, truck miles is an estimate of the miles traveled during 1987 by all trucks having the specified characteristic. Estimates of average miles per truck were derived from the estimates of number of trucks and truck miles.

RELIABILITY OF ESTIMATES

An estimate based on a sample survey will differ from the universe value because of sampling variability and nonsampling error. Sampling variability occurs because observations are made only on a sample, not on the entire universe. Nonsampling errors can be attributed to many sources in the reporting, collecting, and processing of data. Nonsampling errors would occur even if the entire universe was surveyed. The accuracy of a survey result is determined by the joint effects of sampling variability and nonsampling errors.

Measures of Sampling Variability

The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same design. Estimates derived from the different samples would differ from each other and from the universe total. However, the average of these estimates would equal the total derived from a complete enumeration of the universe. This assumes that a complete enumeration has the same nonsampling error as the sample survey. The standard error of the estimate is a measure of the variability among the estimates from all possible samples of the same size and design. It measures the precision we can expect from a sample estimate of the value we would obtain under complete enumeration. The relative standard error (RSE), expressed as a percent, is the standard error of the estimate times 100 divided by the value being estimated. Note that the RSE's are estimates derived from the sample and are also subject to sampling variability. Except for table 2, the RSE's are given only for the top row of estimates and the left column of estimates. The procedures for approximating the RSE's for the other estimates is covered in appendix B.

The estimate from a particular sample and the approximation of the standard error associated with the estimate can be used to construct interval estimates called confidence intervals. A confidence interval is an expression of how well an estimate from a particular sample represents an unknown population value. Associated with each interval is a percentage of confidence (most commonly 68, 90, or 95 percent), which is interpreted as follows. If, for each possible sample, an estimate of an unknown population value and the approximate standard error were obtained, then:

- 1. For approximately 68 percent of the possible samples, the interval from one standard error below to one standard error above the estimate would include the unknown population value. We call this a 68-percent confidence interval.
- 2. For approximately 90 percent of the possible samples, the interval from 1.65 standard errors below to 1.65 standard errors above the estimate would include the unknown population value. We call this a 90-percent confidence interval.
- 3. For approximately 95 percent of the possible samples, the interval from two standard errors below to two standard errors above the estimate would include the unknown population value. We call this a 95-percent confidence interval.

Example of a confidence interval calculation:

Assume the number of drop-frame vans in table 2 is given as 117.4 thousand trucks with a relative standard error of 6.1 percent, then the standard error is:
 $117.4 \times .061 = 7.16$ thousand trucks

An approximate 90-percent confidence interval (the estimate, plus or minus 1.65 standard errors) is 117.4 plus or minus 11.8 or 105.6 to 129.2 thousand trucks.

All comparisons appearing in the "Summary of Findings" of this publication and for which measures of sampling variability are available are accompanied by an indication of the 90-percent confidence interval. Thus, a statement such as "an increase of 29 percent (± 5.1)" indicates a 90-percent confidence interval from 23.9 to 34.1. If the confidence interval contains zero, it is uncertain whether there is an increase or decrease.

Nonsampling Errors

Nonsampling errors cover all sources of errors in the estimates that cannot be attributed to sampling variability. This includes errors in the reporting, collecting, and processing of data as well as the inability to obtain responses from some sampled units. Nonsampling errors lead to biases in the estimates. Bias exists if an estimate, averaged over all possible samples, does not equal the true value being estimated.

One source of possible bias is nonresponse. There are two types of nonresponse. "Total nonresponse" occurs when no response to the questionnaire was received. In most cases, the form was never returned to the Census Bureau, after several attempts to elicit a response. For the United States, approximately 79.5 percent of the questionnaires were returned with some response. "Item nonresponse" applies to an individual item or question which was unanswered, although some response to the questionnaire was received. Several follow-ups, by mail and telephone, were done to reduce both types of nonresponse. The details to account for total nonresponse and item nonresponse are given below.

For most sections in the tables, total nonresponse is handled within the estimation procedure by allocating characteristics to the total nonrespondents in proportion to the characteristics observed for the respondents. The amount of bias introduced in this way depends on the extent that the nonrespondents differ, characteristically, from the respondents.

For most sections in the tables, a "not reported" category includes item nonresponse which remains after response generation. For example, if the major use of a truck cannot be determined, it is included in the "not reported" line. This line shows the part of the total estimate (for that table section) which is missing from the estimates by major use. Users should exercise caution in allocating the not reported figure to the major uses, since the

characteristics of item nonrespondents may differ significantly from those of the respondents. For some questions, a response was generated if it could be derived from other data. For example, engine characteristics and body characteristics were frequently determined through analysis of the vehicle identification number and charts based on manufacturers' specifications. Missing annual miles data (excluding missing data due to total nonresponse) were imputed for each individual truck based on information available about the truck's lifetime miles, age, vehicle type, number of axles, engine type, area of operation, and major use.

ABBREVIATIONS AND SYMBOLS

The following abbreviations and symbols are used in this publication:

- (NA) Not available.
- (RSE) Relative standard error.
- (S) Withheld because estimate did not meet publication standards on the basis of either the response rate, associated standard error, or a consistency review.
- (Z) Represents less than 50 trucks, or 50,000 miles, 50 miles per truck, or .05 percent, as appropriate for the data column.

SUMMARY OF FINDINGS

Approximately 44.6 million private and commercial trucks were registered in the United States during 1987. This is an increase of 10.7 million trucks (32 percent) since the 1982 survey. Trucks in 1987 were driven an estimated 529 billion truck miles and averaged 11.9 thousand annual miles (table A). California and Texas were the leading States in terms of registered trucks, having 10.6 and 8.9 percent of the national total. California and Texas also had the highest annual miles, 10.6 and 9.8 percent, respectively.

Major Use—The increased use of light trucks and vans for personal transportation continues to be the dominant trend in the data. Two-thirds (66 percent) of all trucks were used mainly for “personal transportation,” defined as being used in place of an automobile to go from home to work, for outdoor recreation, camping, etc. This compares to 57 percent in 1982, 54 percent in 1977, and 41 percent in 1972. Slightly less than 29.3 million trucks were used mainly for this purpose and were driven about 287 billion miles. Trucks used for construction and agriculture ranked second and third, with 4.5 and 3.5 million trucks respectively, while services ranked fourth with 2 million trucks.

Pickups, Mini-Vans, Panels, Utilities, and Station Wagons—In 1987, 89 percent of all private and commercial trucks in the Nation were pickups, mini-vans, panels, utilities, and station wagons. They accounted for 99 percent of the trucks used for personal transportation and represented a substantial number of the trucks used in agriculture (72 percent), construction (78 percent), wholesale trade (55 percent), retail trade (74 percent), and services (85 percent). These trucks operated most of the time within the State in which they were based and had a gross vehicle weight of 6,000 pounds or less.

Vehicle Acquisition—In 1987, half (50 percent) of all trucks were purchased “used,” an increase of 4.9 million trucks over the past 5 years. The “used” truck segment represented 53 percent of the vehicles operated for personal transportation, 53 percent of those operated in agriculture, 46 percent of those operated in construction, and 42 percent of those operated in services. The majority (77 percent) operated within their local area.

Intensity of Use—As implied by annual miles per vehicle for the “major use” categories, use was greatest for “for-hire” trucks (see table 2), which averaged 54.3 thousand miles per year, compared with 11.9 thousand miles for all trucks. The light size trucks averaged 10.7 thousand miles per year and the medium size trucks averaged 10.5 thousand miles per year, an 11.1 percent increase for light size trucks from 1982 and a 17 percent increase for medium size trucks from 1982. The light-heavy size trucks averaged 10 thousand miles per year, an average which was unchanged from 1982. The heavy-heavy size trucks averaged 39.2 thousand miles per year. This was a 7.9 percent increase in 1987. Newer trucks generally averaged more miles per year than older models, ranging from 15.1 thousand miles per year for the 1987 models down to 7 thousand miles for the pre-1978 models.

Large Trucks—The truck mile characteristics of large trucks differ substantially from those of pickups, panels, utilities, and station wagons. Different data distributions can be observed when analyzing the large truck segment alone (see table 2). Five million large trucks traveled 102 billion miles annually, averaging 21 thousand miles per truck; “for-hire” large trucks, only 14 percent of the total number of larger trucks, contributed 40 percent of the truck miles.

Number of Trucks—Truck use has increased significantly in the last 5 years. The number of States in which 1,000,000 or more trucks were registered increased from 9 in 1982 to 15 in 1987. Accordingly, the number of States in which less than 200,000 trucks are registered decreased from 9 in 1982 to 6 in 1987.

Average Annual Miles—Between 1982 and 1987 the total miles trucks traveled increased by 40 percent, however, the average annual miles per truck has remained stable over the years: 12.4 in 1972, 11.9 in 1977, 11.2 in 1982, and 11.9 in 1987. The truck population of 19 States was estimated to exceed an average of 12,000 annual miles. This was a 10 State increase from the 1982 number of 9. The number of States whose truck populations were estimated to have traveled less than 10,000 average miles decreased from 12 in 1982 to 9 in 1987.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.
²Detail does not add to total because items were not applicable or multiple responses were possible.
³When no response was obtained, a fleet size of one truck was assumed.
⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.
⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.
⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.
⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.
²Detail does not add to total because items were not applicable or multiple responses were possible.
³When no response was obtained, a fleet size of one truck was assumed.
⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.
⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.
⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.
⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.
²Detail does not add to total because items were not applicable or multiple responses were possible.
³When no response was obtained, a fleet size of one truck was assumed.
⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.
⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.
⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.
⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

Note: Some data cells may have high relative standard errors of estimate (RSE's). See appendix B for approximating the RSE's for the data cells. Some unpublished estimates can be derived from this table by subtracting published data from their respective totals. However, the figures obtained by such subtraction are subject to high sampling variability or poor response quality. These unpublished data are for internal use only. The U.S. data may vary from the sum of the State reports because of rounding.

¹Lease characteristics include both "Leased from" and "Leased to" vehicles. Lease provisions apply to a period of one year or more.

²Detail does not add to total because items were not applicable or multiple responses were possible.

³When no response was obtained, a fleet size of one truck was assumed.

⁴Pickups, panels, vans, and mini-vans were not requested to report the information shown in the Equipment Type section, except for power steering and air conditioning; and in the Fuel Conservation Equipment section, except for radial tires.

⁵Data were derived from the vehicle identification numbers (VIN). "Not reported" indicates those trucks for which the cylinders are unknown.

⁶"Not reported" includes survey respondents who did not report horsepower and/or cubic inch displacement (CID), or reported unreasonable values compared to the truck's other characteristics. In either case, an attempt was made to assign a value based on the vehicle identification number (VIN). If this was successful, the respondent was removed from the not reported category and included under the assigned value.

⁷Pickups, panels, vans, and mini-vans are not included.

b. If this vehicle was for hire, indicate below the type of for hire operation. Enter percentage of mileage for each category.

(1) Operation type

- MOTOR CARRIER — Operated by a company whose primary business is to provide transportation services, carrying freight belonging to others
- OWNER/OPERATOR — Operated by an independent trucker who drives vehicle for himself or on lease to a company —
- as an independent
- leased to a company

(2) Jurisdiction served

- INTERSTATE
- INTRASTATE
- LOCAL — In a single municipality, contiguous municipalities or a municipality and its suburban area; in commercial zones

(3) Kind of carrier

- CONTRACT — Offered transportation service to certain shippers under contracts
- COMMON — Offered transportation service to the general public over regular or irregular routes
- EXEMPT — transported commodities or provided types of services that were exempt from Federal regulation; operated within exempt commercial zones

(4) Was this vehicle operated under ICC authority?

- 1 ☐ YES
- 2 ☐ NO

Item 29 — Which of the following best describes your business or the part of your business in which the vehicle was used? If the vehicle was leased, indicate business of lessee.

- S2S 01 ☐ AGRICULTURAL ACTIVITIES (including fisheries)
- 02 ☐ FORESTRY OR LUMBERING ACTIVITIES
- 03 ☐ CONSTRUCTION WORK — buildings, homes, roads, structures, etc.
- 04 ☐ CONTRACTOR ACTIVITIES OR SPECIAL TRADES — painting, plumbing, electrical work, masonry, carpentry, etc.
- 05 ☐ MANUFACTURING, REFINING, OR PROCESSING ACTIVITIES
- 06 ☐ WHOLESALE TRADE
- 07 ☐ RETAIL TRADE
- 08 ☐ BUSINESS AND PERSONAL SERVICES — used to assist in such services as lodging operations, landscaping, repair (except plumbing, electrical work, etc. — See "Contractor Activities"), laundry, advertising, entertainment, etc.
- 09 ☐ UTILITIES — Used to assist in operation or service of public utilities (telephone, gas, electric, etc.)
- 10 ☐ MINING OR QUARRY ACTIVITIES (includes well drilling) — used to assist in the extraction of natural resources or in hauling to processors
- 11 ☐ DAILY RENTAL — rented out, without a driver, to someone else on a daily or short-term basis
- 16 ☐ ONE-WAY RENTAL
- 12 ☐ GOVERNMENTAL OPERATIONS
- 13 ☐ NOT IN USE — vehicle idle, wrecked, awaiting repair, etc., for more than 90 days
- 14 ☐ FOR HIRE TRANSPORTATION — including small package delivery
- 15 ☐ OTHER — Please describe in detail.

- S80 1 ☐ YES — Continue with item 32b
- 2 ☐ NO — SKIP to item 33

b. If this truck or power unit was involved in any accidents during 1987, how many —

- (1) involved a fatality?
- (2) involved no fatalities, but involved bodily injury requiring medical treatment?
- (3) involved property damage of \$4,200 or more?

Item 33 — Please enter below the number of any ADDITIONAL trucks and/or trailers you own and/or operate at the same home base you listed in item 18.

- a. Pickups, small vans (includes mini-vans)
- b. Straight trucks
- c. Truck-tractors (power units)
- d. Trailers (semi- and/or full)
- e. Converter dollies

APPENDIX B.

Approximating Unpublished Relative Standard Errors

The relative standard errors (RSE's) are presented for only the row and column totals for U.S. tables 3 through 14.

The relative standard errors for an individual cell in U.S. tables can be approximated by using the appropriate two-step procedure below. Actual RSE's, estimated from the sample data, are available on request.

U.S. tables 3 through 9

First, calculate the standard deviation for the U.S. table cell:

$$SD(CLT) = \frac{RCT \times RSE(RCT)}{100} \sqrt{\frac{(CLT)(UST - CLT)}{(RCT)(UST - RCT)}}$$

where:

RCT = the number of trucks in the row (or column)

CLT = the number of trucks in the cell

UST = the number of trucks in the United States

Now, the RSE in percent can be calculated as follows:

$$RSE(CLT) = \frac{100 \times SD(CLT)}{CLT}$$

U.S. tables 10 through 14

For tables 10 through 14, replace "number of trucks" by "truck miles." Although either the row or column total can be used, it is usually best to use the smallest of the two for RCT.

Example—

Suppose, in U.S. table 3, there are an estimated 10.3 thousand trucks in the cell for agricultural multistops or walk-ins, for which an approximation of the RSE in percent is needed. To approximate the RSE in percent for the agricultural multistop or walk-in cell, the following information must be extracted from the table (1) 33,834.6 thousand trucks in the U.S., (2) 3,848.6 thousand trucks and an estimated RSE of 2.4 percent for the "Agriculture" column, and (3) 213.6 thousand trucks and an estimated RSE of 5.3 percent for the "Multistop or walk-in" row. Since the

row total of 213.6 thousand is less than the column total of 3,848.6 thousand, use the row figures to approximate the RSE in percent:

$$SD(10.3) = \frac{213.6 \times 5.3}{100} \sqrt{\frac{10.3(33834.6 - 10.3)}{213.6(33834.6 - 213.6)}} = 2.5$$

$$RSE(10.3) = \frac{100 \times 2.5}{10.3} = 24.3 \text{ percent}$$

Some exceptions from this procedure will yield better approximations of the relative standard error in particular cells. Certain rows and columns in the tables are composed predominately of trucks, excluding pickups and vans ("large trucks"). Because of the sample design, one obtains a better approximation of the relative standard error of the estimate for a cell within a row (column) of "large trucks" by using the row (column) total even though the column (row) total might be smaller. When both totals consist of "large trucks," use the smaller of the row or column totals.

Columns of predominately "large trucks:"

- Tables 4 and 11—Light-heavy and Heavy-heavy
- Table 5—50,000 to 74,999 miles and 75,000 miles or more
- Tables 7 and 13—All except Single-unit 2 axle trucks

Rows of predominately "large trucks:"

- Body Type—All except Pickup, Panel truck or Van, and Multistop or Walk-in
- Annual Miles—50,000 to 74,999 and 75,000 or more
- Range of Operation—Long range (more than 200 miles)
- Gross Weight—All from 19,501 pounds and over
- Lease Characteristics—Leased with driver
- Hazardous Materials Carried—All carrying hazardous materials
- Miles per Gallon—Less than 5 and 5 to 6.9
- Equipment Type, Braking System—Air
- Truck Type and Axle Arrangement—All except Single-unit 2 axle trucks
- Cab Type—All

PUBLICATION PROGRAM

1987 CENSUS OF TRANSPORTATION

Publications of the 1987 Census of Transportation containing data on the characteristics and use of trucks are described below. Publications order forms for the specific reports may be obtained from any Department of Commerce district office or from Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233.

Final Reports

Truck Inventory and Use Survey—52 reports (TC87-T-1 to -52)

This series includes a United States summary and a separate report for each State and the District of Columbia. Data cover the characteristics and uses of the Nation's private and commercial truck resources, such as the number of vehicles, number of truck miles, major use of vehicle, annual miles, model year, body type, vehicle size class, type of fuel, classification of operator, engine size, and use of hazardous material.

Geographic area series—1 report (TC87-A-1)

This report presents data for establishments with payroll from selected transportation industries for the United States, each State, the District of Columbia, and selected metropolitan statistical areas (MSA's). The report presents general statistics on number of establishments, revenue, payroll, and employment by varied transportation classifications. Data are also provided on revenue and employees per establishment, and on revenue and payroll per employee. Comparative statistics showing percent changes in revenue and payroll between 1982 and 1987 also are shown for some kind-of-business classifications.

Subject series—1 report (TC87-S-1)

This report presents data for establishments with payroll, based on size of establishment, size of company or firm, and

legal form of organization. Establishment statistics are presented by revenue size and by employment size; statistics for firms, by revenue size (including concentration by largest firms), by employment size, and by number of establishments operated (single units and multiunits). Major sources of revenue and purchased transportation are provided for some kinds of business. Statistics are presented by kind of business on the number of establishments, revenue, and payroll. Data are presented for the United States as a whole and, where feasible, for States and selected MSA'S.

Microfiche

All published data are also available on microfiche.

Computer Tapes

Tapes from the Truck Inventory and Use Survey are different from the computer tapes for the other economic censuses in that they contain microdata rather than summary data. The term microdata refers to the unaggregated records for the individual responses. The records are modified to avoid the possibility of identifying individual households or establishments.

The tapes for the Truck Inventory and Use Survey contain microdata information for each truck in the sample.

OTHER ECONOMIC CENSUSES REPORTS

Data on retail trade, wholesale trade, service industries, construction industries, manufactures, mineral industries, enterprise statistics, minority-owned business enterprises, and women-owned businesses also are available as part of the 1987 Economic Censuses. A separate series of reports covers the censuses of outlying areas—Puerto Rico, Virgin Islands of the United States, Guam, and the Northern Marianas. Separate announcements describing these reports are available free of charge from Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233.
